## Treadwell Flooring Cleaning & Care

Your floor is very easy to maintain. Using a simple **dust mop** for interior applications or a **broom** for garages will take care of most cleaning.

Some additional tips:

- For minor spills or vehicle drippings, simply wipe them up with a paper towel or other soft cloth.
- Routine maintenance cleaning is best achieved with either a soft bristle broom or a dust mop.
- For heavy cleaning of a soiled floor, sweep away any loose debris and then mop floor with a hard foam mop, hot water and clear ammonia. Four to five ounces of ammonia per gallon of water is all that is needed to adequately remove soiling.
- During the winter road treatment compounds may leave a hazy film on garage floors after cleaning. This can normally be removed with hot water and a deck brush (found at most hardware stores). Continuous rinsing may be required to keep the compounds from drying onto new areas of the floor.
- Some stains (including rust) may require light scrubbing with a kitchen scrubbing pad. If you're unable to remove with just hot water, we recommend using Soft Scrub. Do not use Comet or other abrasive cleaning chemicals on the coatings.
- Floors can also be hosed out and squeegeed dry.
- **Do not use** any cleaner that contains acids (citrus cleaners or vinegar) or soap-based cleaners. Soap based cleaners leave a residue on the flooring that not only detracts from the shine, but also become increasingly slippery should the floor get wet.
